Geological Engineering

Get to know GEOLOGICAL ENGINEERING

This program applies principles and techniques of the earth sciences to solve engineering challenges such as: building infrastructure (tunnels, caverns, foundations, dams) on, with, or through the materials beneath our feet; locating, evaluating, and sustainably extracting essential mineral and energy resources; preventing and remediating soil, rock & water contamination; managing natural hazards; and engineering tools and methods to probe into the earth. You will study physics, chemistry, mechanics, and applied mathematics as well as natural processes that shape the earth such as earthquakes, volcanoes, tectonics, mountain building, erosion, and sedimentation. You will also acquire valuable field skills and training in state-of-the-art geological investigation and geo-engineering analysis and design.

Degree OPTIONS

Bachelor of Applied Science in Engineering

Bachelor of Applied Science in Engineering with Professional Internship

Specializations in Geotechnical, Geoenvironmental, Resource Engineering, and Applied Geophysics

Queen’s ADMISSIONS

Students apply to Queen’s Engineering (QE) through the OUAC (Ontario University Application Centre) website. Secondary School prerequisites include these five 4U courses, English 4U, Calculus and Vectors 4U, Advanced Functions 4U, Chemistry 4U, and Physics 4U. Applicants outside of Ontario may have additional requirements.

Course HIGHLIGHTS

Geological Engineering students have the opportunity to take a wide range of technical courses to help prepare them for the many possible career destinations available. Such courses include:

• Engineering Geology
• Geological Engineering Field School
• History of Life and Earth Dynamics
• Resource Geoscience and Engineering
• Geotechnical (Rock & Soil) Engineering
• Hydrogeology and Groundwater
• Pure and Applied Geophysics
• Exploration and Environmental Geochemistry

"Geological Engineering is the practical application of principles, concepts and techniques of the geological sciences to provide sustainable engineered solutions to human needs. The Earth is our classroom, our work bench, as well as our responsibility."

That is a degree from Queen’s.

queensu.ca/geol
Get the Courses You Need

1ST YEAR

Queen’s Engineering first year is common – courses include: Physics, Chemistry, Calculus, Algebra, Graphics, Computing, and Earth Systems Engineering.

Also ASP100, the entry level course in our Engineering Design and Practice Sequence (EDPS), focusing on problem-solving, experimentation principles, and finishing off with a team-based engineering project.

Discipline selection will take place in February!

2ND YEAR

You will also take the second EDPS course – ASP200 with a focus on Geological Engineering Design.

Following 2nd year in the spring, you will take a Geological Engineering Field School course.

3RD YEAR

In addition to 3 Complementary Studies courses, you will also take 4 Technical Electives in 3rd and 4th year to specialize or diversify in Geological Engineering. You would typically take 2 of these electives in 3rd year.

4TH OR FINAL YEAR

Courses include: 4th year Design Project and a Geological Engineering Field School (prior to the Fall term).

You will have lots of room in this year to create your own specialized or diversified program through technical electives, developing additional expertise in geotechnical and rock engineering for mining, tunneling, or construction; mineral or energy exploration and resource development, geovisualization engineering, and engineering geophysics.

How to use this map

Use the 5 rows of the map to explore possibilities and plan for success in the five overlapping areas of career and academics. The map just offers suggestions – you don’t have to do it all! To make your own custom map, use the My Major Map tool.

Employability skills

Your time at Queen’s will give you valuable skills to boost your employability, including:

- Knowledge of principles and techniques of the earth sciences
- Practical applications of geological science techniques to engineering design
- Understanding of the variability and change of earth materials over space and time - their history controls their future as engineering materials
- Ability to think spatially and analyze in 4 dimensions
- Fieldwork skills - design and carry out site investigations to solve problems
- Technical skills – use up-to-date geological exploration tools, analysis tools, tech equipment and industry leading software
- Research skills - conduct scientific research and analyze quantitative information, develop multiple working hypotheses
- Management and leadership skills - confidence and independence in new situations, group work strategies, time and resource management
- Oral and written communication skills

Where could I go after graduation?

- Engineering Geology
- Geotechnical Engineer
- Groundwater Engineer
- Natural Hazard Mitigation
- Rock Engineering Specialist
- Energy Resource Exploration
- Geomatics and Remote Sensing
- Geo-environmental engineering
- Mineral Resource Exploration
- Coastal & River Engineering
- Resource Management
- Geophysical Specialist
- Environmental Policy
- Mining Engineering
- Space Exploration
- Engineering Law
- Finance

Taking time to explore career options, build experience, and network can help you have a smoother transition to the world of work after graduation.
Geological Engineering

Get the help you need

Queen's provides you with a broad range of support services from your first point of contact with the university through to graduation. At Queen's, you are never alone. We have many offices dedicated to helping you learn, think and do.

Ranging from help with academics and careers, to physical, emotional, or spiritual resources – our welcoming living and learning environment offers the programs and services you need to be successful, both academically and personally. Queen's wants you to succeed! Check out the Student Affairs website for available resources.

Larke Zarichny, GARNET Coordinator
zarichny@queensu.ca

Get started thinking about the future now – where do you want to go after your degree? Having tentative goals (like careers or grad school) while working through your degree can help with short-term decisions about courses and experiences, but also help you keep motivated for success.

QUIP QUEEN’S UNDERGRADUATE INTERNSHIP PROGRAM

START DATES
in May, September, or January

POSITIONS
are paid and full-time

WORK TERMS
are 12-16 months long

PROGRAM OVERVIEW
• Graduate with a “Professional Internship” degree
• Learn about current advances, practices and technologies in business and industry.
• Test drive a career, earn a competitive salary, and get real world experience.

ELIGIBILITY
• 2nd or 3rd Year Students
• Minimum GPA of 1.9

WHY QUIP?
• Gain a year of career-related work experience.
• Build network connections.
• Receive support from Queen’s staff in job search and during internship.

SAMPLE PAST INTERNSHIPS

Cognitive Analytics Development Intern
Biochemistry Intern
GIS Tech Assistant
Mathematician Intern
Health & Wellness Intern
Cheminformatics Intern

For more information, contact quip@queensu.ca or visit the Program Website.
