Get to know GEOLOGICAL ENGINEERING

This program applies principles and techniques of the earth sciences to solve engineering challenges such as: building infrastructure (tunnels, caverns, foundations, dams) on, with or through the materials beneath our feet; locating, evaluating and sustainably extracting essential mineral and energy resources; preventing and remediating soil, rock & water contamination; managing natural hazards; and engineering tools and methods to probe into the earth. You will study physics, chemistry, mechanics and applied mathematics as well as natural processes that shape the earth such as earthquakes, volcanoes, tectonics, mountain building, erosion and sedimentation. You will also acquire valuable field skills and training in state-of-the-art geological investigation and geo-engineering analysis and design.

Degree OPTIONS

Bachelor of Applied Science in Engineering
Bachelor of Applied Science in Engineering with Professional Internship
Specializations in Geotechnical, Geoenvironmental, Resource Engineering, and Applied Geophysics

Queen’s ADMISSIONS

Students apply to Queen’s Engineering (QE) through the OUAC (Ontario University Application Centre) website. Secondary school prerequisites include five 4U and 4M courses, one of which must be English 4U. Calculus and Vectors 4U, Advanced Functions 4U, Chemistry 4U, and Physics 4U are all required. A final competitive minimum grade of 80% must be obtained in all courses. Applicants outside of Ontario may have additional requirements.

A Common START

Queen’s is unique in offering a common first year along with an open discipline choice. When you do choose your program, you don’t have to worry about caps or quotas. Provided you pass all of your first year courses, you are guaranteed a place in your engineering program of choice. Queen’s also offers Section 900, a special extended program for students struggling with first year courses. Take things at a slower pace and recover in time for second year.

Course HIGHLIGHTS

Geological Engineering students have the opportunity to take a wide range of technical courses to help prepare them for the many possible career destinations available. Such courses include:

- Engineering Geology
- Geological Engineering Field School
- History of Life and Earth Dynamics
- Resource Geoscience and Engineering
- Geotechnical (Rock & Soil) Engineering
- Hydrogeology and Groundwater
- Pure and Applied Geophysics
- Exploration and Environmental Geochemistry

“Geological Engineering is the practical application of principles, concepts and techniques of the geological sciences to provide sustainable engineered solutions to human needs. The Earth is our classroom, our work bench, as well as our responsibility.”

Acquire Skills. Gain Experience. Go Global. That is a degree from Queen’s.
queensu.ca/geol
**Get the Courses You Need**

Queen's Engineering first year is common – courses include: Physics, Chemistry, Calculus, Algebra, Graphics, Computing and Earth Systems Engineering. Also APSC100, the entry level course in our Engineering Design and Practice Sequence (EDPS), focusing on problem solving, experimentation principles and finishing off with a team-based engineering project. Discipline selection will take place in February!

**Get Relevant Experience**

Join teams or clubs on campus such as the Environmental Sustainability Team (QUEST) and the Queen's Project on International Development. Apply to first year positions such as First Year Project Coordinators (FYPCs).

See the AMS Clubs Directory or the Queen's Get Involved page for more ideas.

**Get Connected with the Community**

Get involved with the Engineering Society (ENGSOC).

Volunteer on or off campus with different community organizations, such as the ENGSOC Committee on Inclusivity.

**Get Thinking Globally**

Speak to a QUIC advisor or get involved in their programs, events and training opportunities.

Prepare for work or studies in a multi-cultural environment by taking QUIC's Intercultural Awareness Training Certificate and research possible immigration regulations.

**Get Ready for Life After Graduation**

Grappling with program decisions? Go to the Orientation Evenings held by different Engineering departments and attend the various Career fairs during the year.

Get some help deciding by visiting Career Services.

**1ST YEAR**

You will also take the second EDPS course - APSC200 with a focus on Geological Engineering Design.

Following 2nd year in the spring, you will take a Geological Engineering Field School course.

**2ND YEAR**

In addition to 3 Complementary Studies courses, you will also take 2 Technical Electives in 3rd and 4th year to specialize or diversify in Geological Engineering. You would typically take 2 of these electives in 3rd year.

**3RD YEAR**

Courses include: 4th year Design Project and a Geological Engineering Field School (prior to the Fall term).

You will have lots of room in this year to create your own specialized or diversified program through technical electives, developing additional expertise in geological and rock engineering for mining, tunnelling or construction; mineral or energy exploration and resource development, geoenvironmental engineering and engineering geophysics.

**4TH OR FINAL YEAR**

Courses include: 4th year Design Project and a Geological Engineering Field School (prior to the Fall term).

Investigate requirements for full-time jobs or other opportunities related to careers of interest. Engage in your 4th year design project – a real world example of the work that Geological Engineers do.

Assess your experience, knowledge and skill set and think about the education or experience that will best help you achieve your career goals.

Where could I go after graduation?

- Engineering Geology
- Geotechnical Engineering
- Groundwater Engineer
- Natural Hazard Mitigation
- Rock Engineering Specialist
- Energy Resource Exploration
- Geomatics and Remote Sensing
- Geo-environmental engineering
- Mineral Resource Exploration
- Coastal & River Engineering
- Resource Management
- Geophysical Specialist
- Environmental Policy
- Mining Engineering
- Space Exploration
- Engineering Law
- Finance

Take time to explore career options, build experience, and network can help you have a smoother transition to the world of work after graduation.

* Some careers may require additional training. Listed careers are suggestions only.

**Employability skills**

Your time at Queen's will give you valuable skills to boost your employability, including:

- Knowledge of principles and techniques of the earth sciences
- Practical applications of geological science techniques to engineering design
- Understanding of the variability and change of earth materials over space and time - their history, controls their future as engineering materials
- Ability to think spatially and analyze 4 dimensions
- Fieldwork skills – design and carry out site investigations to solve problems
- Technical skills – use up-to-date geological exploration tools, analysis tools, hi-tech equipment and industry leading software
- Research skills – conduct scientific research and analyze quantitative information, develop multiple working hypotheses
- Management and leadership skills – confidence and independence in new situations, group work strategies, time and resource management
- Oral and written communication skills

**Where could I go after graduation?**

*This map is intended to provide suggestions for activities and careers, but everyone’s abilities, experiences, and constraints are different. Build your own Major Map using our online My Major Map tool.*
How to use this map

Use the 5 rows of the map to explore possibilities and plan for success in the five overlapping areas of career and academics. The map just offers suggestions – you don’t have to do it all! To make your own custom map, use the My Major Map tool.

Get started thinking about the future now – where do you want to go after your degree? Having tentative goals (like careers or grad school) while working through your degree can help with short-term decisions about courses and experiences, but also help you keep motivated for success.

Get the help you need

Queen’s provides you with a broad range of support services from your first point of contact with the university through to graduation. At Queen’s, you are never alone. We have many offices dedicated to helping you learn, think and do.

Ranging from help with academics and careers, to physical, emotional, or spiritual resources – our welcoming living and learning environment offers the programs and services you need to be successful, both academically and personally. Queen’s wants you to succeed! Check out the Student Affairs website for available resources.
